

We have set up a lockbox at this address and the code is 6453. You will need to press clear before putting the code in and the face of the padlock can be removed. The code need to be put in to close the face back up also.

It is currently padlocked to some scaffold in the garage but we are pouring the hardstand tomorrow so it will likely go on the front scaffold somewhere. Please give me some notice if you want to get there for a site measure just in case it gets moved again. I didn't mention to Bruno yesterday but getting the vanity tops on would really help us to get the tilers back through but I understand you need time to plan this. If there's anything I can do to help or check measure anything please let me know.
